

CUBE – Electronic Certificate of Origin Application

Who is it for?

Customs Authority, Agent, Bank, Shipper, Trader (Exporter, Importer), Manufacturer, Chambers of Commerce

Overview:

CUBE is a robust and easy to use web-based application through which exporters and agents apply seamlessly to the chamber of their choice on a single platform for their preferential or non-preferential electronic Certificate of Origin (CO). The application provides an end-to-end service for exporters and agents ranging from application submission to the electronic generation of Certificate of Origin on CUBE.

CUBE consolidates all applications with related attached documents in a central repository for easy retrieval and tracking. This eliminates the need to maintain physical documents which can be cumbersome. CUBE sends alerts and notifications via SMS or email to relevant parties (Exporter/Agents) whenever an action is required at each application process stage or when there is an application status update e.g. when application has been approved/queried/rejected.

To ensure interoperability with trade systems, the application data elements were standardized against the WCO data harmonization model.

Exporters and agents can easily print approved Certificate of Origin (CO) at their location or at approving chamber's office. The Certificate of Origin (CO) is protected with various security features to ensure its authenticity and integrity. Customs Authorities of Importing Countries can also authenticate the Certificate of Origin issued by the Exporting Countries.

CUBE presents a complete solution to the challenges that chambers and exporter experience by turning the existing manual and paper-based process of stamping and signing of trade documents into a streamlined electronic system – providing chambers and their member's real value in cost savings and efficiency gains.

Features:

- User and role management
- Workflow management
- Document management
- Automatic task assignment
- E-payment gateway
- Email & SMS alert integration service
- Online verification
- Multilingual capability
- Chamber Processing
- Organization Management
- Membership Processing
- Information Portal
- Business Intelligence
- Billing and Invoicing
- Notification Services
- Single Sign-On
- API Services

Benefits:

- It saves cost and processing time
- Enhances chamber revenue mobilization
- Faster documentation certification turnaround times
- User friendly online web solution
- Increased compliance and record keeping
- Adds value to chamber membership
- Helps chambers attract new members

THANK YOU
